## Count Number of Digits and Letters

String: "Python123Programming"

Output: No of Letters : 17  
No of Digits : 3

```

    3 # Import string module
    4 import string
    5
    6 # Take any string data
    7 stringVal = input("Enter any text: ")
    8
    9 # Initialize error variable
    10 error = False
    11
    12 # Iterate the loop to check any uppercase letter exists or not
    13 for character in stringVal:
    14     if character not in string.ascii_lowercase:
    15         error = True
    16
    17 # Print message based on the value of error
    18 if error == True :
    19     # Print error message
    20     print("All characters are not in lowercase")
    21 else:
    22     # Print success message
    23     print("Text in correct format")
    24
    25
    
```

Console 1/A

```

    In [1]: runfile('/home/fahmida/code/constant1.py', wdir='/home/fahmida/code')
    Enter any text: Hello World
    All characters are not in lowercase

    In [2]: runfile('/home/fahmida/code/constant1.py', wdir='/home/fahmida/code')
    Enter any text: linuxhint
    Text in correct format

    In [3]:
    
```

## Check String is Numeric

```

    def findNumeric(listOfString):
    return [s for v, s in enumerate(listOfString)]

    if __name__ == '__main__':
    finally:
    
```
